

jsnol file preparation

The screenshot shows the Visual Studio Code editor with the file `TrainingDataConverter.java` open. The file contains a Java class `TrainingDataConverter` with a `createJsonLine` method and a `main` method. The `main` method iterates over a directory of files, parsing each one and writing the result to a JSON file. The terminal output shows the execution of the program, listing the files processed and the final output file path.

```
src > main > java > com > framework > converter > TrainingDataConverter.java > TrainingDataConverter > main(String[] args)

15  public class TrainingDataConverter {
43  public static JSONObject createJsonLine(String html, String java) {
58
59      return jsonObj;
60  }
61
62  public static void main(String[] args) {
63      // Adjusted paths to match your specific locations
64      String inputDir = "C:\\Users\\nikhi\\OneDrive\\Documents\\GEN AI Daily classroom notes\\Week 4 day-01\\finetuning\\leafaptaps\\leafaptaps";
65      String outputFile = "C:\\Users\\nikhi\\OneDrive\\Documents\\GEN AI Daily classroom notes\\Week 4 day-01\\finetuning\\Jsoloutputdata\\training_data_chat.jsonl";
66
67      try (DirectoryStream<Path> stream = Files.newDirectoryStream(Paths.get(inputDir), "*.txt")) {
68          BufferedWriter writer = Files.newBufferedWriter(Paths.get(outputFile),
69              StandardCharsets.UTF_8, StandardOpenOption.CREATE, StandardOpenOption.APPEND);
70
71          for (Path inputFile : stream) {
72              try {
73                  ParseResult result = parseExample(inputFile);
74                  JSONObject jsonObj = createJsonLine(result.html, result.java);
75                  writer.write(jsonObj.toString());
76                  writer.newLine();
77                  System.out.println("Processed " + inputFile.getFileName());
78              } catch (IOException e) {
79                  e.printStackTrace();
80              }
81          }
82      } catch (IOException e) {
83          e.printStackTrace();
84      }
85  }
86  }
```
